

Top 5 Asset Management Risk & Control challenges and how to solve them

Acin is on a mission to pioneer the global standard in operational risk management.

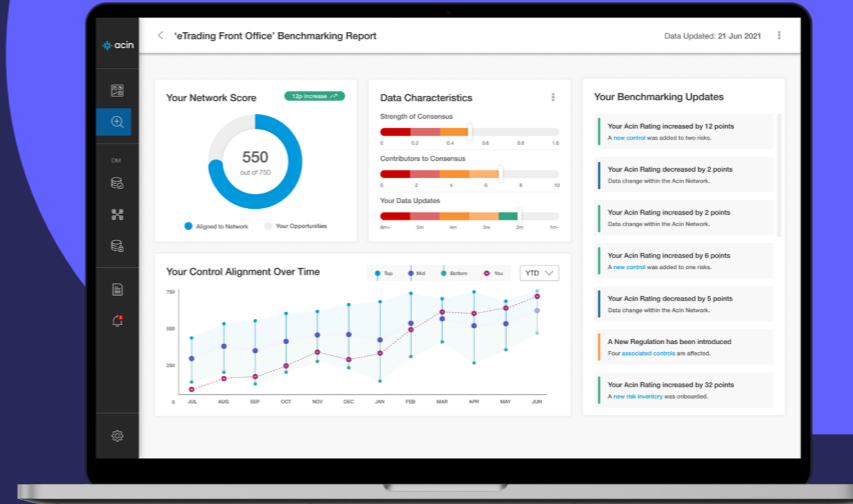

What people are saying about Acin

External benchmarking is always good and something we look to do across all our risk frameworks.

There are real cost savings from the business case for using Acin.

The Acin platform helped to calibrate my control data through addressing challenges such as control proliferation, duplication and non-controls.

Top 5 Challenges

- 1 My RCSA is high pain and low value
- 2 I worry not all risks are identified and mitigated
- 3 I can't evidence operational risk to stakeholders
- 4 I don't know where to focus remediation
- 5 GRC not delivering value

How to Solve Them

- Fix the data you have
- Learn from your peers and other sectors
- Quantify your risk and control completeness
- Move to risk trigger based dynamic assessment

The Acin Platform & Network

- Clean**
Acin's data standards and structure
- Complete**
Optimised risks and controls based on data from peers, other relevant sectors and Acin's practitioners
- Quantify**
Score, compare, track and demonstrate control completeness
- Dynamic**
Proactively manage risk exposure through emerging risks & controls, regulatory alerts and scenarios
